COORDINATION CHEMISTRY REVIEWS

Contents

Advances in the chemistry of Lewis base adducts of alane and gallane
M.G. Gardiner and C.L. Raston 1

Synthetic and structural aspects of the chemistry of saturated polyaza macrocyclic ligands bearing pendant coordinating groups attached to nitrogen
K.P. Wainwright 35

Some complexes of all-carbon ligands and related chemistry
M.I. Bruce 91

Stereochemistry and polymetallic ligand-bridged molecular assemblies
F.R. Keene 121

Electrochemical studies of metal carbonyl compounds
A.M. Bond and R. Colton 161

The influence of structure on the activity and toxicity of Pt anti-cancer drugs
T.W. Hambley 181

Recent advances in the chemistry of arene complexes of ruthenium (0) and ruthenium (II)
M.A. Bennett 225

Mechanistic studies of some macrocyclic complexes
S.F. Lincoln 255

Resolutions of tertiary phosphines and arsines with orthometallated palladium(II)–amine complexes
S.B. Wild 291

Donor atom preferences in complexes of platinum and palladium with amino acids and related molecules
T.G. Appleton 313

Design of chiral picen-based complexes for molecular recognition of α-aminoacids and nucleic acids
J.R. Aldrich-Wright, R.S. Vega and P.A. Williams 361

Structures and spectroscopy of hexaaquametal (III) ions
J.K. Beattie and S.P. Best 391

Author index 417

Subject index 417
